

Azure data Engineer

SHAIK JAHEER

Phone: +91-7095826724

Email:shaikjaheer617@gmail.com

Experience Summary

Having around 2 years of total experience as a Data Engineer in the field of Cloud Technologies (Azure). Skilled in designing and implementing cloud-based data solutions, leveraging Azure services such as Azure Data Factory, Azure Synapse Analytics, Azure Databricks, and Azure SQL Database. Experienced in building scalable data pipelines, optimizing data workflows, and collaborating with cross-functional teams to deliver secure, high-performance solutions.

Professional Competency

- ✚ Strong working knowledge on **Azure Data bricks, Azure Data Factory**.
- ✚ Hands-on experience in **Azure Data factory** and its Core Concept's like **Datasets, Pipelines and Activities, Scheduling and Execution**
- ✚ Designed and developed **data ingestion pipelines** from on-premises to different layers into the **ADLS** using Azure Data Factory
- ✚ Experience with integration of data from multiple data sources
- ✚ Knowledge on **Azure Data bricks**, creation of Notebooks
- ✚ Worked on creating **the RDDs, DFs** for the required input data and performed the data transformations using Spark-core
- ✚ Extensive experience working in an **Agile environment**
- ✚ Extensively Worked on **Copy Data activity**
- ✚ Implemented **dynamic pipeline** to extract the multiple files into multiple targets with the help of single pipeline.
- ✚ Pipeline execution methods (**Debug vs Triggers**)
- ✚ Strong in writing the SQL queries using **Joins, Co-Related Queries and Sub-Queries**
- ✚ Monitor and manage Azure Data Factory
- ✚ Extensively used ETL methodology for supporting Data Extraction, Transformation and processing of data from Source systems using Azure Data Factory into Azure Data Lake Storage
- ✚ Involved in production support activities.
- ✚ Good team player with excellent communication and interpersonal skills
- ✚ Play a key role in team.
- ✚ Leveraged **GitHub** for version control

Employment History

- Working as a Programmer Analyst at **Cognizant Technology Solutions** in Chennai from AUGUST 2024 to Till Date.

Education

- Bachelor of Technology (B.Tech) in Electronics and communication Engineering (ECE) – VEL TECH university.

Technical Skill set:

- **Azure Services** : Azure Databricks, Azure Data factory, Azure Data Lake
- **Database Languages** : SQL
- **Programming Languages /APIs** : Python,Pyspark
-

INTERNSHIPS:

- **Cognizant Technology Solutions (1/11/2024 and 4/15/2024)**

Work Experience:

#PROJECT1

Incremental ETL Pipeline for Telecom Broadband Customer Requests Using Azure Data Factory

- Developed an Azure Data Factory incremental pipeline using watermark logic to process new and updated telecom broadband customer request data.
- Implemented Bronze, Silver, and Gold layer architecture for scalable data ingestion and transformation.
- Designed latest-state incremental load processing instead of SCD Type 2, as historical version tracking was not required for the customer request data.
- Performed Silver Layer transformations including data cleansing, deduplication, product standardization, null handling, and derived column creation.
- Standardized telecom product information such as ADSL, VDSL, SVVDSL, and VDSL-100MBPS to maintain consistent product classification.
- Implemented data quality checks for mandatory fields, duplicate records, invalid product types, missing KLS_ID values, and incorrect request dates.
- Maintained only the most recent customer request records based on LAST_UPDATED_DATE using watermark and update timestamp logic.
- Improved pipeline performance by processing only new and changed records instead of performing full loads.

#PROJECT2

Near Real-Time Customer Data Pipeline using Databricks Auto Loader

Designed and developed a near real-time ELT pipeline using Databricks Auto Loader, PySpark, Delta Lake, and Databricks Workflows.

Implemented Medallion Architecture with Bronze, Silver, and Gold layers for raw ingestion, cleansing, and business reporting.

Configured Auto Loader with schema inference, schema evolution, managed file events, checkpointing, and file arrival triggers for automated incremental ingestion.

Added fault-tolerance using checkpoint locations, workflow retries, availableNow trigger, and Delta mergeSchema support.

Handled malformed and unexpected records using PERMISSIVE mode, badRecordsPath, and _rescued_data column.

Added audit columns including ingestion timestamp and source file name to support data lineage and debugging.

Developed Silver layer transformations for data cleansing, deduplication, standardization, and validation.

Built Gold layer aggregate tables based on business requirements for downstream analytics and reporting.
